To promote Neuro-Urology around the world, the International Neuro-Urology Society has organized a course on unique focus to look at gender within neuro-urology.

We are proud that Florence has been chosen for this comprehensive course on Neuro-Urology.

The target group is multiprofessionals comprising urologists, neurologists, rehab and urogynecologists and other healthcare professional figures such as nurses and physiotherapists with interest in Neuro-Urology. The course will deal with neurophysiology of the lower urinary tract, the differences in diagnostic workup and the current treatment strategies among the gender.

Particularly attention will be paid on exploring gender dimensions within the neurological diseases such as spinal cord lesions, multiple sclerosis, Parkinson's disease, and stroke. Special topics will be addressed also according to the audience's demand. Participants will actively take part of the discussion in interactive sessions.

We welcome you to join us to have the great opportunity for an experience exchange and a pleasant time in Florence!
